

WHAT TO EXPECT POST YOUR KYBELLA TREATMENT:

- You will have mild discomfort, burning or tenderness for a few days after the anesthetic wears off from the treatment.
- Swelling and mild erythema (redness) will increase for the first 1-2 days and will subside over the next 1 ½ weeks (swelling is dependent on the treatment area size)
- Mild bruising if present will resolve over the next week. You can take Arnica Montana to help speed up this process.
- Itching or warmth at the injection site may be present, you can use topical Benadryl and Tylenol if needed.
- Numbness may be present and may take 30 days to completely resolve
- Area of firmness in the areas injected may last up to 30 days and you should not have subsequent treatments till this has resolved.

Please call our office at 240-0088 to schedule your next injection or post photos after the firmness and numbness has resolved.

Please call our office at 608-240-0088 for questions and concerns, or call Anne's cell phone at 608-513-8699 if it's after hours. If you are having unusual symptoms that are life threatening please go directly to the ER.
